

ASSIGNMENT 5**- User Story to Task Conversion -**

MARASIGAN, VEM AIENSI A.
38SCS-1

March 25, 2024

User Story: As a user, I want to search for products on the e-commerce website by keyword and filter by category and price range so that I can easily find the products I'm interested in.

Breakdown:**1. Design:**

- Task 1.1: Design a search area including a search and a filter button layout (wireframe)
- Task 1.2: Design a layout for the filter content (wireframe)
- Task 1.3: Design a layout for the price range filter (wireframe)
- Task 1.4: Design an unable-to-find message.

2. Development:

- Task 2.1: Implement the user interface for the search area.
- Task 2.2: Implement a backend logic for product searching.
- Task 2.3: Implement functionality for the filter button.
- Task 2.4: Implement code for price range filter logic.

3. Testing:

- Task 3.1: Develop unit tests for keyword, category, and price range matching.
- Task 3.2: Perform manual testing for product matching based on search prompts
- Task 3.3: Perform manual testing with search prompts on non-existing products for verification of the unable-to-find message.

4. Deployment:

- Task 4.1: Integrate search functionality to the e-commerce website.
- Task 4.2: Deploy search feature to the testing environment.

TASK TABLE

Stage	Task	Assignee	Description
Design	1.1: Design a search area including a search and a filter button layout (wireframe)	Marianne (UX designer)	Design noticeable icons for search and filter. Search can transform into a search bar once clicked.
Design	1.2: Design a layout for the filter content (wireframe)	Marianne (UX designer)	Design a clear layout for categories.
Design	1.3: Design a layout for the price range filter (wireframe)	Marianne (UX designer)	Design a simple number slider portraying the price range.
Design	1.4: Design an unable-to-find message.	Marianne (UX designer)	Design a simple and informative unable-to-find product message.
Development	2.1: Implement the user interface for the search area.	Vem (Front-end Developer)	Build code for the UI layout of the search area.
Development	2.2: Implement a backend logic for product searching.	David (Back-end Developer)	Develop functionality for keyword matching to product names.
Development	2.3: Implement functionality for the filter button.	David (Back-end Developer)	Develop functionality for keyword matching to product categories in descriptions.
Development	2.4: Implement code for price range filter logic.	David (Back-end Developer)	Develop functionality for number matching to product's price ranges.
Testing	3.1: Develop unit tests for keyword, category, and price range matching.	Aaron (QA Tester)	Write unit tests for displaying matched products.
Testing	3.2: Perform manual testing for product matching based on search prompts	Aaron (QA Tester)	Test matching products with search prompts.
Testing	3.3: Perform manual testing with search prompts on non-existing products for verification of the unable-to-find message.	Aaron (QA Tester)	Test search prompts that does not match to any product and verify if unable-to-find message is displayed.
Deployment	4.1: Integrate search functionality to the e-commerce website.	Vem & David	Integrate search functionality to the website app
Deployment	4.2: Deploy search feature to the testing environment.	Vem & David	Deploy search feature to the testing environment.
