

ASSIGNMENT 6**- Definition of Done & Acceptance Criteria-**

MARASIGAN, VEM AIENSI A.
3BSCS-1

April 13, 2024

Study Title:

MerrMail Assistant: Using Artificial Intelligence for Assistance in University Email Concerns

User Stories:

1. As a back-end developer, I want to use TensorFlow API to provide input scores so that the Merrmail system can determine the appropriate reply.
2. As a front-end developer, I want to use simple CSS formatting for email replies so that the replies can be easy to read and understand.
3. As a QA Tester, I want a testing environment so that I can verify if the accuracy of the Merrmail's response.

Overall Definition of Done:

- Code adheres to C# Convention's coding standards.
- Unit tests cover at least 80% of critical functionalities for each user story.
- All code is peer-reviewed for potential errors and improvements.

User Story #1

As a back-end developer, I want to use TensorFlow API to provide input scores so that the Merrmail system can determine the appropriate reply.

| Definition of Done:

- **Functionality**
 - * Tensorflow is integrated to the system's operation logic
 - * The API is customized and is trained to provide system requirements
 - * Functional tests passed
- **Code**
 - * The code has been peer reviewed
 - * Follows coding standards

| Acceptance Criteria:

- **Integrating TensorFlow (AC-1)**
 - * Can access database of information and use it as a resource to generate responses
 - * Provide comparison scores between context and database
 - * The system does not crash or produce unexpected behavior
- **Successful Prediction (AC-2)**
 - * The system accurately predicts an appropriate reply based on the input scores
 - * Gives at least 3 results within the score range

User Story #2

As a front-end developer, I want to use simple CSS formatting for email replies so that the replies can be easy to read and understand.

| Definition of Done:

- **Presentation**
 - * Emails should use a simple color palette with high contrast.
 - * Headers and subheadings should be clearly distinguishable.
- **Other Consideration**
 - * Met user satisfaction
 - * Presentation is accepted by the team

| Acceptance Criteria:

- **Formatting (AC-1)**
 - * Email formatting should include proper line spacing
 - * Email replies should have a:
 - font size of at least 14px (AC-1.1)
 - margin of 10px (AC-1.2)
 - padding of 3px (AC-1.3)
- **Compatibility (AC-2)**
 - * Styles work dynamically
 - * No format bugs/issues in other devices
 - * Emails must be readable on both desktop(AC-2.1) and mobile devices(AC-2.2).
- **User Acceptance (AC-3)**
 - * At least 90% of email recipients find the formatting easy to read.

User Story #3

As a QA Tester, I want a testing environment so that I can verify if the accuracy of the Merrmail's response.

| Definition of Done:

- **Verification**
 - * Sample inquiries are tested and at least 80% of the questions received a correct response
 - * Conducted the sample questions and met the acceptance metric
- **Test Environment**
 - * Test environment stores questions and automatically test it to the system.

| Acceptance Criteria:

- **Integration of testing environment (AC-1)**
 - * A seperate function must be available as the testing environment built-in to code.
 - * Testing environment is capable of storing a set of questions regardless of number.
- **Question list (AC-2)**
 - * 10 samples of formal questions must be tested with its respective possible answer
 - * 5 samples of informal questions for email validity check.
- **Accuracy Metric (AC-3)**
 - * A metric of 0-0.30 is the score range as the acceptance rate for response
